

주빈님 멤버 리스트

문제 원인

```
def profile_read(request, id) :  
    readpro= User.objects.get(id=id)  
    # test1= readpro.username
```

User.id 와 StuProfile.id의 번호가 달라서 생기는 문제였습니다.

해결방법

- StuProfile.id로 먼저 찾고, 그 이후에 username 이용해서 User 찾는 방법

view.py

```
#-----  
def profile_read(request, id) :  
    read_stu= StuProfile.objects.get(id=id)  
    read_user = User.objects.get(username=read_stu.user_name)  
    context = {'readpro': read_user,  
               'readpro2': read_stu  
               }  
    return render(request, 'readcon2.html', context)  
#-----
```

template

```

<div class="box-body">
  <div class="form-group">
    <label for="exampleInputEmail1">My id</label> <input type="text"
      name="myid" class="form-control" value="{{readpro.username}}"
      readonly="readonly">
    </div>

    <div class="form-group">
      <label for="exampleInputPassword1">bio</label>
      <textarea class="form-control" name="mybio" rows="3"
        readonly="readonly">{{readpro2.bio}}</textarea>
    </div>

    <div class="form-group">
      <label for="exampleInputEmail1">Contact</label> <input type="text"
        name="contact" class="form-control" value="{{readpro2.contact}}"
        readonly="readonly">
    </div>

    <div class="form-group">
      <label for="exampleInputEmail1">My location</label> <input type="text"
        name="mylocation" class="form-control" value="{{readpro2.location}}"
        readonly="readonly">
    </div>
  </div>
</div>

```
